SUPPLEMENTAL DATA

TO

WYOMING PLANNING SYSTEM

OCTOBER 1976

BLM Library
Denver Federal Center
Bldg. 85, OC-521
P.O. Box 25047
Denver, CO 80225

Foreword

Since publication of the Wyoming Planning System Summary in July 1975, many changes have been made in Wyoming Planning System Units. The data presented in this supplement shows new planning units, other planning boundaries, and special resource items such as coal areas, wild horses, forested lands, and recreation primitive areas being considered. The illustrations which follow, show general information. For specific detail, reference should be to the District or Area Offices.

After completion of various planning system components, a new Wyoming Planning Summary booklet will be prepared. This summary will supplement temporarily until a new booklet is prepared.

Area underlain by bedded trona in Sweetwater County occurs in some 25 different layers of the Wilkins Peak member of the Green River formation. The salines are interbedded with oil shale, marl, limestones, and sandstones. Trona deposits are estimated at 50 billion tons in beds of mineable thickness, with low concentrations of uranium and phosphate in thinner beds.
